

ATTLEE AI - OPERATING PLAN

AI-Powered Gateway 2 Building Safety Compliance Platform

Date: March 2026 **Founders:** George Clarke (Product & Technology), Hugo Hiley (Commercial)

EXECUTIVE SUMMARY

Attlee AI is building an AI-powered compliance platform for UK Gateway 2 Building Safety submissions. The platform automates regulatory compliance checking, reducing manual review time from 5-20 hours to 2-5 minutes, and auto-generates compliance matrices worth £500-1,000 in seconds.

Current Status:

- Product: 70% production-ready with 55 compliance rules engine, two-phase AI assessment, and export system
- Market: £20M+ annual opportunity, 2,000+ Gateway 2 submissions per year
- Go-to-Market: Target fire safety consultancies, housing associations, and residential developers
- Funding: Seeking £100K-250K pre-seed from UK angels and accelerators

90-Day Plan:

- Month 1: Secure MVP, sign 4 pilot customers
 - Month 2: Prove value, convert 2 pilots to paid (£3K-5K MRR)
 - Month 3: Scale to 8-10 paying customers, close £100K-250K angel round
-

TABLE OF CONTENTS

1. Technical Assessment
 2. MVP Definition
 3. Product Development Roadmap
 4. Ideal Customers & Business Development Strategy
 5. Investor Strategy
 6. Founder Task Allocation
 7. Operational Infrastructure Setup
 8. 90 Day Execution Plan
-

1. TECHNICAL ASSESSMENT

Current System Architecture

Core Technology Stack:

- **Frontend:** React 18 + TypeScript + Vite + Tailwind CSS (14 pages, 38 components)
- **Backend:** Node.js 24 + Express + TypeScript (9 route groups fully implemented)
- **Database:** PostgreSQL with Prisma ORM (normalized schema with 12+ models)
- **AI Layer:** Anthropic Claude Sonnet 4.5 + OpenAI embeddings
- **Infrastructure:** Railway PaaS with Docker containerization

System Components:

User Upload → Document Processing → Compliance Engine → AI Enrichment → I
(55 Rules) (Claude) (PDF)

What Already Exists

✓ Production-Ready Components

1. Compliance Rules Engine (3,668 lines)

- 55 deterministic rules for BSR Gateway 2 requirements
- Two-phase assessment: Rules + LLM enrichment
- Evidence extraction with page-level citations
- Assessment time: 2-5 minutes per typical pack

2. Backend API (9 route groups, ~30 endpoints)

- Document upload and processing pipeline
- Quick assessment workflow (`/api/assess`)
- Client/Pack management system
- Export generation (PDF, Excel)
- Butler reference library (RAG system)
- Team collaboration endpoints

3. Database Schema (PostgreSQL)

- Client → Pack → PackVersion → Documents hierarchy
- Assessment results storage with audit trail
- Task management with dependencies
- Service package templates
- Status lifecycle tracking

4. Frontend Application

- Landing page with marketing sections
- Quick Assess workflow (main entry point)
- Results dashboard with submission verdict (RED/AMBER/GREEN)
- Client management interface
- Pack detail views with version history
- Clerk authentication integration (protected routes)

5. Export System

- Submission Readiness Report (PDF via Puppeteer)
- Compliance Matrix (Excel via ExcelJS)

- Color-coded status indicators
- Evidence linking (document → page → quote)

Prototype/Incomplete Components

1. Document Amendment Workflow

- Components exist (DocumentRevisionDashboard, RevisionExporter)
- DOCX generation framework present but untested
- Proposed changes UI built but not integrated

2. Team Collaboration Features

- Database schema complete
- Task assignment/commenting endpoints exist
- Multi-user workflows not fully tested

3. Service Package Templates

- Template system coded
- Auto-task generation implemented
- UI integration partial

4. Mobile Experience

- Responsive components built
- Not tested on actual devices
- Mobile-specific interactions incomplete

Technical Gaps

Critical Issues

1. Security: API keys exposed in `.env` file MUST FIX WEEK 1

- Anthropic key and OpenAI key visible in git history
- Must move to environment variables only

- Remove from repository history

2. Database Persistence

- Railway deployment requires PostgreSQL configuration
- SQLite works locally but doesn't persist in production
- Environment variable setup needed

3. Testing Coverage

- Framework exists (Vitest backend, Playwright frontend)
- Critical workflows not validated
- No load testing with real document volumes

Non-Critical Gaps

4. Performance Optimization

- Sequential LLM calls create bottleneck (55 rules evaluated serially)
- Potential for parallel batching (30s target vs current 2-5min)

5. Error Handling

- No rate limiting on API
- Limited input sanitization
- No quota management for AI calls

Architectural Risks

1. AI Cost Scaling

- Current: 55+ Claude API calls per assessment
- At scale (100 assessments/day): £500-1,000/month in AI costs
- Mitigation: Caching, batching, rule optimization

2. Document Processing Reliability

- PDF parsing varies by document quality (scanned vs native PDFs)

- No OCR fallback currently
- Tables and diagrams not well-handled

3. Monolithic Deployment

- Single service handles everything (assessment, API, PDF generation)
- No horizontal scaling strategy
- Puppeteer (Chromium) adds 200MB+ to container size

4. Vendor Lock-in

- Heavy dependency on Anthropic Claude
- No multi-model strategy
- Mitigation: Abstract LLM layer behind interface

Production Readiness Summary

Overall Status: ~70% Production-Ready

Can Deploy Today For:

-  Single-user quick assessments
-  Basic compliance checking workflows
-  Report/matrix export
-  Pack management with version history

Needs Work For:

-  Multi-team environments
-  High-volume processing (>20 assessments/day)
-  Complex document amendment workflows
-  Enterprise security requirements

2. MVP DEFINITION

True Minimum Viable Product for Pilot Customers

Goal: Run real compliance assessments for 3-5 pilot housing associations or developers.

Required Capabilities

Core Assessment Flow:

1. Document Ingestion Ready

- Upload 3-10 PDF documents per pack
- Accept fire strategies, drawings, specifications, structural calculations
- Handle 50-500 page documents
- Store securely with audit trail

2. Document Indexing / RAG Ready

- Text extraction from PDFs
- Chunk documents for semantic search
- Generate vector embeddings (OpenAI)
- Evidence retrieval from document corpus

3. Compliance Rule Engine Ready

- Execute 55 deterministic rules
- Check document presence, content verification, quality assessment
- Assign status: Met / Partial / Not Met
- Extract evidence with page numbers

4. AI Evidence Extraction Ready

- Claude Sonnet 4.5 enrichment for nuanced criteria
- Semantic understanding of fire strategies, evacuation plans
- Cross-document consistency checking
- Reasoning generation for findings

5. Gap Analysis Ready

- Identify missing requirements
- Highlight inconsistencies across documents
- Triage findings by urgency (Critical/High/Medium/Low)
- Estimate remediation effort and cost impact

6. Compliance Matrix Generation *Ready*

- Excel export with all 55 requirements
- Color-coded status (Green/Yellow/Red)
- Evidence linking (Requirement → Document → Page → Quote)
- Summary statistics (% Met, % Partial, % Not Met)

7. Report Generation *Ready*

- Submission Readiness Report PDF (3-5 pages)
- Includes: Verdict (RED/AMBER/GREEN), top blockers, action items
- Professional formatting via Puppeteer

8. Audit Trail *Ready*

- Assessment history per pack
- Version comparison (track changes across submissions)
- Status lifecycle tracking
- User activity log

MVP Success Criteria

Before Real Customers Can Run Assessments:

1. Security Hardening (Week 1 - Critical)

- Move API keys to environment variables only
- Implement user authentication (Clerk already integrated)
- Add API rate limiting
- Set up HTTPS in production

2. Database Persistence (Week 1-2)

- Configure PostgreSQL in Railway
- Verify data retention across deployments
- Set up automated backups

3. Testing Validation (Week 2-3)

- Run 10 test assessments with real documents
- Validate all 55 rules produce correct outputs
- Verify PDF and Excel exports work reliably
- Test with edge cases (missing docs, scanned PDFs, large files)

4. Performance Baseline (Week 3-4)

- Confirm <5 minute assessment time for typical packs
- Monitor AI costs per assessment
- Track error rates and failure modes

5. User Experience (Week 4-5)

- Simplified onboarding (1-page explainer)
- Clear instructions for document upload
- Intuitive results presentation
- Download buttons work consistently

What Can Be Deferred Post-MVP

- Document amendment/DOCX generation (manual follow-up works for pilots)
- Team collaboration features (single-user assessment sufficient)
- Service package templates (manual task tracking acceptable)
- Mobile optimization (desktop-first for consultants)
- Advanced analytics dashboard
- Multi-model AI switching
- API integrations with third-party tools

3. PRODUCT DEVELOPMENT ROADMAP

Phase 1 — MVP Usable for Pilot Customers (Weeks 1-6)

Objective: Secure 3-5 pilot customers running real assessments within 6 weeks.

Features

-  Quick Assess workflow (already built)
-  Compliance matrix export (ready)
-  Submission Readiness Report (ready)
-  Security hardening (move API keys, add rate limiting)
-  Database persistence (PostgreSQL setup in Railway)
-  Testing suite (validate 55 rules, export reliability)

Technical Work

Week 1: Security Fixes *Critical*

- Remove API keys from `.env` in git history
- Set up environment variables in Railway
- Add API rate limiting middleware
- Enable CORS restrictions

Week 2: Database Migration

- Set up PostgreSQL in Railway
- Run Prisma migrations
- Configure connection pooling
- Set up automated daily backups

Week 3: Testing & Validation

- Write unit tests for all 55 rules
- Integration tests for assessment workflow
- E2E test for upload → assess → download flow
- Load test with 10 concurrent assessments

Week 4: Error Handling & Monitoring

- Implement structured logging (Winston/Pino)
- Add error tracking (Sentry or Railway logs)
- Create health check endpoint
- Set up uptime monitoring

Week 5: UX Polish

- Add loading states and progress indicators
- Improve error messages (user-friendly)
- Create onboarding walkthrough
- Add tooltips for compliance terms

Week 6: Documentation

- Write user guide (how to prepare documents)
- Create video walkthrough (5 min)
- FAQ for common issues
- API documentation (if exposing to partners)

Infrastructure Improvements

- Railway deployment with PostgreSQL
- Automated CI/CD from GitHub
- Environment-specific configs (dev/staging/prod)
- SSL certificate for custom domain (attlee.ai)

AI Improvements

- Prompt optimization for better evidence extraction
- Confidence scoring calibration
- Hallucination detection (validate page numbers)

Deliverables

- Deployed MVP at <https://attlee.ai>
 - 10 validated test assessments
 - User documentation
 - Security audit checklist
-

Phase 2 — Early Production SaaS (Months 2-4)

Objective: Convert pilots to paying customers, add 10-15 more customers.

Features

- 🛠 Pricing/billing integration (Stripe)
- 🛠 Usage analytics dashboard
- 🛠 Email notifications (assessment complete, errors)
- 🛠 Document amendment proposals (complete DOCX export)
- 🛠 Team collaboration (share assessments, assign reviews)
- 🛠 White-label option for consultancies

Technical Work

Month 2: Monetization

- Stripe integration for subscriptions
- Usage metering (assessments per month)
- Invoice generation
- Payment method management

Month 2-3: Analytics & Insights

- User dashboard (assessments run, compliance trends)
- Admin panel (customer usage, system health)
- Assessment quality metrics (accuracy vs human review)

Month 3: Collaboration Features

- Share assessments with team members
- Commenting on findings
- Task assignment for remediation
- Email notifications

Month 3-4: Document Amendments

- Complete DOCX export with track changes
- Proposed text improvements
- Human review approval workflow
- Version comparison UI

Infrastructure Improvements

- Redis caching for faster repeat assessments
- Separate job queue for long-running tasks (BullMQ)
- Horizontal scaling (multiple backend instances)
- CDN for static assets

AI Improvements

- Fine-tune prompts based on pilot feedback
- Add caching layer for repeated document analysis
- Implement parallel rule evaluation (reduce to <1 min)

Deliverables

- 15-20 paying customers
 - £5K-10K MRR
 - Case studies from 3 pilot customers
 - Testimonials and proof points
-

Phase 3 — Scalable Infrastructure (Months 5-9)

Objective: Scale to 50-100 customers, improve reliability and performance.

Features

- 🛠️ API access for partners
- 🛠️ Regulatory document updates (versioned compliance rules)
- 🛠️ Mobile app or PWA
- 🛠️ Advanced reporting (compliance trends, benchmarking)
- 🛠️ Gateway 3 support (completion certificates)
- 🛠️ Integration marketplace (export to Procore, BIM 360, etc.)

Technical Work

Month 5-6: Performance Optimization

- Parallel rule evaluation
- Optimize LLM calls (batching, caching)
- Lazy loading for large documents
- Database query optimization

Month 6-7: API Platform

- Public API with authentication
- Webhooks for assessment completion
- SDK for Node.js and Python
- API documentation portal

Month 7: Compliance Rule Versioning

- Version control for 55 rules
- Support historical assessments
- Update notifications when regulations change
- Diff view between rule versions

Month 8: Mobile/PWA

- Progressive Web App for mobile access
- Offline mode for viewing saved assessments
- Push notifications

Month 9: Advanced Features

- Benchmarking (compare your pack vs industry average)
- Predictive analytics (likelihood of approval)
- Gateway 3 completion certificate checking
- Building Assessment Certificate prep

Infrastructure Improvements

- Microservices architecture (separate assessment engine)
- Kubernetes for orchestration (if scaling beyond Railway)
- Multi-region deployment (UK + EU)
- Advanced monitoring (Datadog/New Relic)

Deliverables

- 50-100 paying customers
 - £30K-60K MRR
 - API partnerships with 2-3 prop-tech platforms
 - Gateway 3 product launched
-

4. IDEAL CUSTOMERS & BUSINESS DEVELOPMENT STRATEGY

Target Customer Categories (Prioritized)

Priority 1: Fire Safety Consultancies ★★ ★

Why They Would Buy:

- Spend 5-20 hours per project manually checking compliance
- Billing £500-1,000 per compliance matrix
- Drowning in Gateway 2 work (capacity bottleneck)
- Need to scale without hiring more engineers

Problem Attlee Solves:

- Automate 80% of manual document review
- Generate compliance matrices in seconds (worth £500-1,000)
- Never miss a requirement (AI + rules engine)
- Free up time for higher-value interpretation work

Decision Maker:

- Technical Director or Director of Consultancy
- Typically a chartered fire engineer with 15-25 years experience
- Controls budget for tools and software

Typical Deal Size:

- £299-499/month per user (subscription)
- Or £99-149 per assessment (pay-as-you-go)
- Enterprise: £2K-5K/month for unlimited use + white-label

Pilot Project Approach:

- Offer free assessment of their next 3 Gateway 2 projects
- Compare Attlee output vs their manual matrix
- Measure time saved and accuracy
- Convert to paid after pilot proves value

Target Companies:

1. **FDS Consult** - Granville Harris (Director), David Sibert (Technical Director)
 2. **OFR Consultants** - Stewart Dabin (Residential Director), Dr Danny Hopkin, Jack Wilshaw, Andy Passingham (Founder)
 3. **Trenton Fire** (Butler & Young/Socotec subsidiary)
-

Priority 2: Housing Associations ★★

Why They Would Buy:

- Building 50-200 high-rise units per year (multiple Gateway 2 submissions)
- Internal teams lack capacity for detailed compliance checking
- Consultancy fees are expensive (£3K-15K per project)
- Need confidence before submitting to BSR

Problem Attlee Solves:

- Pre-submission quality checks before engaging consultants
- Identify gaps early to avoid rejection (£50K-200K delay costs)
- Internal QA before handing to fire engineer
- Reduce consultant review time (and cost) by 40-60%

Decision Maker:

- Group Director of Development or Technical Director
- Reports to Chief Executive
- Budget for project delivery and compliance

Typical Deal Size:

- £499-999/month for team access (5-10 users)
- £1,500-3,000/year per building (project-based pricing)
- Enterprise: £10K-20K/year for portfolio-wide access

Pilot Project Approach:

- Offer to assess their next 2 submissions for free
- Show gap analysis before they pay consultants
- Measure: # of issues caught early, consultant time saved
- Position as "insurance policy" against rejection

Target Companies (G15 Housing Associations):

1. **L&Q** - Vicky Savage (Group Director of Development & Sales)
 2. **Peabody** - Development Director
 3. **Network Homes** - Development Director
 4. **Notting Hill Genesis** - Development Director
 5. **Clarion Housing** - Technical Director
-

Priority 3: Residential Developers ★★

Why They Would Buy:

- Submit 5-20 Gateway 2 applications per year
- Project delays cost £50K-200K per month
- Need certainty before spending £6K-12K on BSR review
- In-house teams lack regulatory expertise

Problem Attlee Solves:

- Self-serve compliance checks before consultant engagement
- Catch fatal flaws early (before design lock-in)
- Demonstrate due diligence to investors/lenders
- Reduce resubmission risk

Decision Maker:

- Technical Director or Head of Building Safety
- Works with Commercial Director and Project Directors
- Controls pre-construction budget

Typical Deal Size:

- £149-299/month per user
- £499-999/year per project (large schemes)
- Volume discount for 10+ projects per year

Pilot Project Approach:

- Free assessment on 1 upcoming submission
- Present findings to technical team + consultants
- Measure: issues identified, consultant validation rate
- Position as "pre-flight checklist" before submission

Target Companies:

1. **Barratt London** - Craig Carson (Technical Director)
 2. **Berkeley Group** - Technical Director
 3. **Ballymore** - Technical Director
 4. **Mount Anvil** - Technical Director
 5. **Countryside Partnerships** - Building Safety Lead
-

Priority 4: Building Control Advisors ★

Why They Would Buy:

- Review Gateway 2 submissions for compliance
- Manual review is slow and inconsistent
- Need standardized checklists
- Want audit trail for decisions

Problem Attlee Solves:

- Fast initial review before detailed assessment
- Standardized compliance framework
- Documented evidence links for audit
- Catch obvious issues early

Decision Maker:

- Managing Director or Technical Director
- Approved Inspector status
- Controls operational tooling budget

Typical Deal Size:

- £299-499/month per reviewer
- £149 per assessment reviewed
- Enterprise: £2K-5K/month for firm-wide access

Pilot Project Approach:

- Free trial on next 5 submissions they're reviewing
- Compare Attlee findings vs their manual review
- Measure time saved per review
- Position as "first-pass screening tool"

Target Companies:

1. **Exigere** - Managing Director (vocal on Gateway 2 delays)
 2. **Butler & Young** - Director
 3. **NHBC** - Building Control services
 4. **Local Authority Building Control (LABC)** members
-

Structured Outreach Strategy

Phase 1: Warm Introductions (Weeks 1-2)

Objective: Get 5-10 intro calls with target companies

Tactics:

1. Leverage Existing Network

- Hugo: Reach out to contacts in property/construction
- George: Post on LinkedIn announcing Attlee launch
- Ask for warm intros to fire safety consultants

2. Industry Events

- Attend: Building Safety Conference, Fire Safety Event, RIBA CPD sessions
- Sponsor: Fire Protection Association (FPA) member events
- Exhibit: PropTech UK meetups

3. LinkedIn Outreach

- Hugo: Connect with all 20 target contacts on list
- Personalized messages (not generic sales pitch)
- Mention specific pain points (e.g., "48-week Gateway 2 delays")

Message Template:

Subject: Reducing Gateway 2 rejection risk with AI

Hi [Name],

I'm reaching out because [Company] handles [X] Gateway 2 submissions per year, and I've built something that might save your team significant time.

We're seeing 40%+ rejection rates at Gateway 2 due to documentation gaps. Attlee AI runs 55 compliance checks in 2-5 minutes and auto-generates the compliance matrix you'd normally spend 4-8 hours building manually.

Would you be open to a 15-minute demo on [Date]? I can show you how it works on one of your recent submissions (anonymized if needed).

Best, George & Hugo Attlee AI

Phase 2: Pilot Customer Acquisition (Weeks 3-8)

Objective: Sign 3-5 pilot customers for free trials

Tactics:

1. Free Pilot Offer

- "Assess your next 3 Gateway 2 submissions for free"
- "No credit card required, no strings attached"
- "We'll compare our AI output vs your manual review"

2. Demo Strategy

- 15-minute live demo (upload → assess → results)
- Use their real documents (or anonymized examples)
- Show compliance matrix + gap analysis side-by-side
- Highlight time saved (5 min vs 5 hours)

3. Objection Handling

- "AI can't replace human judgement" → "We agree. Attlee handles routine checks so you focus on interpretation."
- "Our process is fine" → "Even 10% time savings = £10K-50K/year in capacity."
- "Too expensive" → "Our starter plan is £299/month. Your first compliance matrix pays for itself."

4. Success Metrics

- Track: # of issues found by Attlee that consultant missed
- Measure: Time saved (manually building matrix vs AI)
- Capture: Consultant feedback on accuracy

Phase 3: Case Studies & Testimonials (Weeks 9-12)

Objective: Convert pilots to paying customers, create proof points

Tactics:

1. Case Study Template

- Challenge: [Company] was spending 8 hours per compliance matrix
- Solution: Attlee AI automated 80% of manual checks
- Result: 5-minute assessment, £500 saved per project, 95% accuracy vs human review

2. Video Testimonials

- Record 2-minute interview with pilot customer
- Questions: "What problem were you trying to solve?" "How did Attlee help?" "Would you recommend?"
- Use on landing page and in sales conversations

3. Industry Press

- Submit to: Building Magazine, Construction News, Fire Safety Matters
 - Angle: "AI startup automates building safety compliance, saving consultancies 80% of review time"
 - Include customer quotes and pilot results
-

Phase 4: Scalable Acquisition (Month 4+)

Objective: Scale beyond personal outreach

Tactics:

1. Content Marketing

- Blog: "55 Things the BSR Checks in Your Gateway 2 Submission"
- Guide: "How to Prepare a Rejection-Proof Fire Strategy"
- Webinar: "AI for Building Safety Compliance: What Works, What Doesn't"

2. SEO

- Target keywords: "Gateway 2 compliance checker", "BSR submission checklist", "fire strategy review"

- Build backlinks from industry sites

3. Paid Ads

- LinkedIn ads targeting: Fire Safety Engineer, Building Control, Technical Director (UK construction)
- Google Search ads: "gateway 2 compliance", "bsr submission help"
- Budget: £1K-2K/month initially

4. Partner Channel

- Partner with architectural practices (referral fee for leads)
 - Integrate with project management tools (Procore, BIM 360)
 - White-label for large consultancies
-

5. INVESTOR STRATEGY (UK/LONDON FOCUS)

Stage: Pre-Seed / Angel Funding

Funding Target: £100K-250K

Use of Funds:

- 50% Product development (George full-time for 6 months)
- 30% Customer acquisition (pilot programs, marketing)
- 20% Operations (hosting, AI API costs, legal)

Ideal Investor Profile:

- UK-based angels who can open doors to housing associations, developers, consultancies
 - PropTech / Construction Tech specialists with UK industry connections
 - Applied AI investors who understand LLM applications
 - Regulatory Tech investors (compliance automation experience)
-

Angel Investors (UK/London)

1. Saul Klein - LocalGlobe (London)

Why Interested:

- Co-founded LocalGlobe (seed-stage fund, London-based)
- Strong thesis on applied AI and vertical SaaS
- Invested in UK proptech (GoCardless, Citymapper)
- Understands UK housing crisis and regulatory landscape

Connection Strategy:

- Warm intro via LocalGlobe portfolio founders
 - Pitch angle: "AI for UK housing infrastructure bottlenecks, post-Grenfell regulatory transformation"
 - Highlight: £20M+ UK market, first-mover in BSR compliance
-

2. Alice Bentinck - Entrepreneur First (London)

Why Interested:

- Co-founder of Entrepreneur First (London HQ)
- Focus on technical founders solving hard problems
- Strong UK government/policy connections (relevant for BSR)
- Invests personally in EF alumni companies

Connection Strategy:

- Apply to EF alumni network or angel syndicate
 - Pitch angle: "Two technical founders, solving post-Grenfell regulatory bottleneck with 55 proprietary rules + AI"
 - Emphasize technical depth and market timing
-

3. Matt Robinson - GoCardless Co-Founder (London)

Why Interested:

- Built GoCardless (payments infrastructure for recurring billing)
- Understands B2B SaaS unit economics
- Active angel investor in UK startups
- Appreciates vertical SaaS with clear ROI

Connection Strategy:

- LinkedIn outreach or warm intro via GoCardless network
 - Pitch angle: "Stripe for building safety compliance - recurring revenue, negative churn potential"
 - Highlight: Clear customer pain, £299-499/month pricing
-

4. Brent Hoberman - Founders Factory (London)**Why Interested:**

- Co-founded Lastminute.com, Founders Factory
- Active in proptech and infrastructure investments
- Well-connected in UK business/government circles
- Focuses on UK market opportunities

Connection Strategy:

- Apply to Founders Factory studio program
 - Direct approach via LinkedIn (high-profile but accessible)
 - Pitch angle: "UK housing crisis + Building Safety Act = massive compliance market opening up"
-

5. Dharmash Mistry - Former LendInvest VP, Angel (London)**Why Interested:**

- Former VP Product at LendInvest (UK proptech unicorn)

- Deep understanding of UK property/construction market
- Invests in B2B SaaS with strong unit economics
- Venture Partner at Notion Capital (UK/EU focus)

Connection Strategy:

- LinkedIn introduction via LendInvest network
 - Pitch angle: "SaaS for building safety consultancies, £299-499/mo subscriptions, 90%+ gross margins"
 - Emphasize unit economics and scalability
-

6. Taavet Hinrikus - Wise Co-Founder (London)

Why Interested:

- Co-founded TransferWise/Wise (London-based fintech unicorn)
- Active angel investor in European startups
- Understands regulated industries and compliance automation
- Portfolio includes infrastructure and B2B companies

Connection Strategy:

- Warm intro via Wise/fintech network
 - Pitch angle: "Infrastructure for UK construction compliance – similar regulatory pain to early fintech"
 - Highlight: Large addressable market, high switching costs once adopted
-

7. Robin Klein - LocalGlobe & Index Ventures (London)

Why Interested:

- Partner at LocalGlobe (brother of Saul Klein)
- Previously at Index Ventures (early Skype, Betfair investor)
- Focus on European tech with global potential
- Strong track record in marketplace and SaaS

Connection Strategy:

- Warm intro via LocalGlobe portfolio
 - Pitch angle: "Vertical SaaS for £20M+ UK compliance market, potential to expand to EU/Australia"
 - Emphasize first-mover advantage in post-2022 regulatory regime
-

8. Tom Hulme - Google Ventures Europe (London)**Why Interested:**

- Managing Partner at GV Europe (London office)
- Former IDEO designer, understands product design
- Invested in UK proptech (Nested, Unmortgage)
- Can provide Silicon Valley connections while UK-based

Connection Strategy:

- Apply via GV website or warm intro
 - Pitch angle: "AI-first compliance platform, strong product/market fit in UK construction"
 - Highlight: Technical founders, working product, pilot traction
-

9. James Wise - Balderton Capital (London)**Why Interested:**

- Partner at Balderton Capital (leading European VC, London-based)
- Focus on seed and Series A B2B companies
- Invested in construction tech and proptech
- Strong European network

Connection Strategy:

- Warm intro via Balderton portfolio

- Pitch angle: "Vertical SaaS for UK building safety, expanding to EU markets (similar regulations)"
 - Emphasize scalability and European expansion potential
-

10. Carlos Espinal - Seedcamp (London)

Why Interested:

- Managing Partner at Seedcamp (Europe's leading pre-seed fund)
- Focus on technical founders solving real problems
- Portfolio includes proptech and AI companies
- Very hands-on with portfolio support

Connection Strategy:

- Apply to Seedcamp via website (they review all applications)
 - Pitch angle: "AI infrastructure for UK construction compliance, £20M TAM growing post-Building Safety Act"
 - Emphasize: Strong technical capability, clear customer pain
-

Incubators / Accelerators / Venture Studios (UK/London)

1. Entrepreneur First (EF) - London ★★ ★

Why Strong Fit:

- London HQ, UK-focused with global reach
- Invests pre-company or very early stage
- Strong government/policy network (relevant for BSR)
- £80K investment + equity for 6-month program
- Alumni network of 1,000+ technical founders

Application Strategy:

- Apply as early-stage company (already incorporated)

- Emphasize: Technical depth (55 rules, AI engineering), working prototype
- Highlight market timing (Building Safety Act 2022)

Timeline: Rolling applications, cohorts start quarterly

2. Seedcamp - London ★★☆☆

Why Strong Fit:

- Europe's leading pre-seed fund (London-based)
- €100K investment for ~8% equity
- 3-month intensive program
- Strong portfolio support and follow-on funding
- Portfolio includes proptech and vertical SaaS

Application Strategy:

- Online application (they review everything)
- Emphasize: Clear customer pain, technical founders, pilot traction
- Show: Working product, 3-5 pilot customers, early revenue/LOIs

Timeline: Rolling applications, investment decisions in 4-6 weeks

3. Antler - London ★★☆☆

Why Strong Fit:

- Global early-stage VC with London office
- Invests pre-revenue (£100K for ~10% equity)
- 10-week residency program
- Strong in proptech and infrastructure

Application Strategy:

- Apply as early-stage company
- Highlight: Working product, addressable market (£20M+), technical team

- Emphasize: UK housing crisis + regulatory tailwind

Timeline: Cohorts start quarterly (Jan, Apr, Jul, Oct)

4. L Marks - London ★★

Why Strong Fit:

- London-based proptech accelerator
- Corporate partnerships: Grosvenor, Landsec, British Land
- Can directly connect to housing associations and developers
- 3-month program with £20K investment + £50K optional

Application Strategy:

- Position as "infrastructure for building safety"
- Emphasize customer traction with housing associations
- Leverage corporate partnerships for pilot customers

Timeline: 2 cohorts per year (applications in Feb/Aug)

5. Pi Labs - London ★★★

Why Strong Fit:

- Europe's first dedicated proptech VC (London HQ)
- Seed-stage fund (£250K-1M investments)
- Portfolio includes UK construction tech companies
- Strong network in UK property industry

Application Strategy:

- Direct application via website
- Warm intro via portfolio founders (check their portfolio)
- Emphasize: £20M+ UK market, recurring revenue model, pilot traction

Timeline: Rolling applications, quarterly investment committee

6. Founders Factory - London ★★

Why Strong Fit:

- London-based venture studio + accelerator
- Corporate partnerships with easyJet, The Guardian, L'Oréal
- 6-month program with £40K investment
- Hands-on support building product

Application Strategy:

- Apply via website or direct outreach to Brent Hoberman
- Pitch angle: "UK housing crisis + regulatory transformation"
- Highlight: Technical founders, working MVP, clear GTM

Timeline: Rolling applications, cohorts start quarterly

7. Techstars London ★★

Why Strong Fit:

- Global accelerator with London program
- \$120K investment for 6% equity
- 3-month intensive program
- Strong mentor network in UK construction/proptech

Application Strategy:

- Apply to Techstars London (not US programs)
- Emphasize: B2B SaaS, clear customer pain, pilot traction
- Highlight: UK-specific regulatory opportunity

Timeline: 1 cohort per year, applications open Mar-May

8. Accelerator London ★

Why Strong Fit:

- West London-based accelerator
- Focus on deep tech and AI companies
- 12-week program, £25K investment
- Strong connections to UK corporates

Application Strategy:

- Position as AI/deep tech company (55 proprietary rules + LLM)
- Emphasize technical innovation
- Highlight UK market opportunity

Timeline: 2 cohorts per year

9. Bethnal Green Ventures (BGV) - London ★

Why Strong Fit:

- London-based, focus on tech for social good
- Building safety = social impact (post-Grenfell)
- £20K investment + 3-month program
- Strong network in housing/community sectors

Application Strategy:

- Angle: "Preventing another Grenfell through AI-powered compliance"
- Emphasize social impact (safe housing, regulatory enforcement)
- Connect to mission of ensuring building safety

Timeline: 2 cohorts per year

10. UCL Technology Fund - London ★

Why Strong Fit:

- University College London's investment fund
- Focus on deep tech and AI spin-outs
- Seed investments £100K-500K
- Strong in construction tech and built environment

Application Strategy:

- Position as AI infrastructure company
- Leverage any UCL connections (Bartlett School of Architecture)
- Emphasize technical innovation (hybrid rules + LLM)

Timeline: Rolling applications

UK Government Grants & Support

1. Innovate UK Smart Grants

- **Amount:** £25K-500K (no equity taken)
- **Focus:** AI, construction innovation, productivity
- **Fit:** "AI for building safety compliance" aligns with government priorities
- **Timeline:** Quarterly funding rounds

Application Strategy:

- Position as R&D project (improving AI accuracy, expanding to Gateway 3)
 - Emphasize: Job creation, UK construction productivity, building safety
 - Partner with university (UCL Bartlett) for research credibility
-

2. Construction Innovation Hub

- **Amount:** Varies (grants + partnerships)
- **Focus:** Digital transformation in UK construction

- **Fit:** AI-powered compliance directly addresses productivity
- **Network:** Connects to major contractors and developers

Application Strategy:

- Apply for innovation challenges
 - Position as digital infrastructure for building safety
 - Leverage for customer intros (Housing Associations, developers)
-

Investor Outreach Timeline

Weeks 1-4: Preparation

- Finalize pitch deck (10 slides)
- Record demo video (3 minutes)
- Prepare financial model
- Get 3 customer LOIs or pilot commitments

Weeks 5-8: Accelerator Applications

- Submit to Seedcamp (rolling)
- Apply to Antler London (check cohort timing)
- Apply to Pi Labs (direct submission)
- Apply to L Marks (if timing aligns with intake)
- Apply to Entrepreneur First

Weeks 9-12: Angel Outreach

- LinkedIn outreach to 10 UK angels (from list above)
- Request 15-minute intro calls
- Warm intros via Hugo's network
- Target: 5-10 angel meetings

Weeks 13-16: Close Round

- Share terms with interested parties (SAFE or priced round)

- Aim for £100K-250K total
 - Target: 2-3 angels + 1 accelerator
 - Close within 2-4 weeks of term sheet
-

UK Angel Syndicates to Consider

1. Fuel Ventures (London)

- Pre-seed fund + angel syndicate
- £100K-300K investments
- Very hands-on, focus on B2B SaaS

2. SFC Capital (London)

- SEIS/EIS fund (tax-advantaged for UK investors)
- £100K-1M seed investments
- Portfolio includes proptech

3. Cornerstone VC (London)

- Pre-seed/seed fund
- Focus on AI and vertical SaaS
- UK and European startups

4. Ada Ventures (London)

- Early-stage fund led by women VCs
- Focus on underrepresented founders
- Strong in B2B SaaS and impact

5. Episode 1 (London)

- Seed-stage VC (previously Connect Ventures)
 - Portfolio includes proptech and SaaS
 - £500K-2M investments (might be too early, but good to know)
-

6. FOUNDER TASK ALLOCATION

George Clarke - Product & Technology (80-100% time)

Primary Responsibilities:

1. Product Development (60%)

- Build and ship MVP improvements (security, testing, UX)
- Implement Phase 1 roadmap features
- Fix bugs and performance issues
- Iterate based on customer feedback

2. AI & Compliance Engine (20%)

- Optimize LLM prompts for accuracy
- Refine 55 compliance rules based on pilot learnings
- Improve evidence extraction and citation quality
- Monitor AI costs and optimize usage

3. Customer Pilot Support (15%)

- Onboard pilot customers (setup accounts, training)
- Troubleshoot technical issues during assessments
- Gather feedback on UX and accuracy
- Run demo calls with prospective customers

4. Technical Documentation (5%)

- Write API docs (if exposing to partners)
- Maintain internal architecture docs
- Create troubleshooting guides

Weekly Schedule:

- Mon-Thu: Focus on product development (no meetings)
 - Fri AM: Pilot customer support / demos
 - Fri PM: Weekly sync with Hugo, investor prep
-

Hugo Hiley - Commercial & Partnerships (15-20% time)

Given Hugo's limited availability (demanding full-time role at Fospha), focus ONLY on high-leverage commercial activities.

Primary Responsibilities:

1. Business Development (50% of available time)

- Identify and reach out to target customers (20 contacts on list)
- Schedule and run intro calls/demos
- Negotiate pilot terms and LOIs
- Follow up with leads until signed

2. Investor Outreach (30% of available time)

- Prepare pitch deck and financial model
- Apply to accelerators (Seedcamp, Antler, EF, Pi Labs)
- Reach out to angel investors for intros
- Run investor pitch calls

3. Industry Validation (15% of available time)

- Attend key industry events (1-2 per month)
- Build relationships with fire safety consultants
- Gather market intelligence on competitors
- Validate pricing and positioning

4. Strategic Planning (5% of available time)

- Weekly sync with George on priorities
- Review customer feedback and roadmap
- Adjust GTM strategy based on learnings

Weekly Schedule:

- 2-3 hours: Outreach to customers/investors (LinkedIn, email)
- 1-2 hours: Calls with prospects or investors
- 1 hour: Weekly sync with George
- TOTAL: ~5-6 hours/week until Fospha role ends

Hugo Should NOT Spend Time On:

- Product development or technical decisions (defer to George)
- Day-to-day customer support (George handles)
- Marketing content creation (outsource or defer)
- Accounting/admin (use tools like Xero, Stripe)

Division of Labor - Who Owns What

Area	Owner	Notes
Product roadmap	George	Hugo provides input on customer needs
Technical architecture	George	Full ownership
Pilot customer acquisition	Hugo (lead), George (support)	Hugo finds customers, George demos
Investor fundraising	Hugo (lead), George (support)	Hugo runs process, George presents technical vision

Area	Owner	Notes
Customer onboarding	George	Hugo introduces, George trains
Industry events	Hugo	George attends if high-value (e.g., BSR events)
Compliance rule accuracy	George	Hugo validates with industry contacts
Pricing strategy	Both	Iterate based on customer feedback
Partnership deals	Hugo	George provides technical feasibility input
Operational setup	George	Except email (Hugo handles)

7. OPERATIONAL INFRASTRUCTURE SETUP

Hugo Handles: Email & Domain Only (Week 1 - 90 minutes)

Domain & Email Setup:

-  Register/configure attlee.ai domain
-  Set up DNS (Cloudflare or Google Domains)
-  Create Google Workspace account (£10/month for 2 users)
 - george@attlee.ai
 - hugo@attlee.ai
 - hello@attlee.ai (forwarding to both)
-  Enable 2FA for security

-  Set up email signatures for both founders

Email Signature Template:

Hugo Hiley
Co-Founder, Commercial
Attlee AI
hugo@attlee.ai | attlee.ai
AI-powered compliance for UK building safety

George Handles: Everything Else

Week 1 Tasks (4-5 hours total)

1. Business Bank Account (30 minutes)

- **Recommended:** Tide (free, instant setup, no physical branch needed)
- **Alternative:** Monzo Business (free), Starling Bank Business
- Set up both founders as signatories
- Link to Stripe for payments

2. Payment Processing - Stripe (45 minutes)

- Create Stripe account (stripe.com)
- Add business details, bank account
- Enable subscriptions and invoicing
- Set up tax collection (UK VAT if applicable)
- Create 3 pricing tiers:
 - Starter: £299/month
 - Professional: £499/month
 - Enterprise: Custom pricing

3. Accounting Software (30 minutes)

- **Recommended:** Xero (£12/month) or FreeAgent (£19/month)

- Link to business bank account
- Set up categories: Software/SaaS, AI API costs, Hosting, Marketing

4. Internal Communication - Slack (30 minutes)

- Create Slack workspace (free for 2 people)
- Channels: #general, #product, #customers, #investors
- Integrate with GitHub (commits), Railway (deployments), Stripe (payments)

5. CRM - Notion Database (60 minutes)

- Create "Customer Pipeline" database
- Fields: Company, Contact Name, Email, Status (Lead/Demo/Pilot/Paid), Last Contact, Next Action
- Create "Investor Tracker" database
- Fields: Investor Name, Type (Angel/VC), Stage (Intro/Meeting/Term Sheet), Last Contact
- Populate with 20 target contacts from existing list

6. Legal Basics - Terms & Contracts (45 minutes)

- Use Termly or TermsFeed (free generator) for:
 - Privacy Policy
 - Terms of Service
 - Cookie Policy
- Create pilot agreement template (1 page):
 - Duration: 30-60 days, free trial
 - Customer provides feedback
 - Either party can terminate
- Create simple subscription agreement (use Stripe defaults)

Week 2 Tasks (3-4 hours total)

7. LinkedIn Company Page (45 minutes)

- Create Attlee AI company page
- Add logo, cover image, description
- Post 1: "Launching Attlee AI - AI-powered Gateway 2 compliance"
- Invite Hugo to follow and share

8. Demo Booking - Calendly (30 minutes)

- Create free Calendly account
- Set up "15-min Intro Call" event type
- Set up "30-min Demo" event type
- Link to Google Calendar
- Add to website CTA and email signature

9. Email Templates (30 minutes)

- Create Gmail canned responses:
 - Template 1: Initial outreach to prospects
 - Template 2: Follow-up after demo
 - Template 3: Pilot agreement send
 - Template 4: Investor intro request

10. Investor Data Room - Google Drive (60 minutes)

- Create folder: "Attlee AI Investor Materials"
- Subfolders:
 - Pitch Deck
 - Financial Model
 - Product Demo Video
 - Customer Testimonials
 - Company Docs (formation, cap table)
 - Legal (contracts, DPAs)

11. Review Platforms (30 minutes)

- Create profiles on:
 - G2 (B2B software reviews)
 - Capterra (software directory)
 - Product Hunt (plan launch for later)

12. Press Kit (30 minutes)

- Company description (2 sentences)
 - Founder bios (50 words each)
 - High-res logo (PNG + SVG)
 - Product screenshots (3-5 images)
 - Contact: hello@attlee.ai
-

Summary Checklist for George

Week 1 (Must-Have):

- ☐ Business bank account (Tide or Monzo Business)
- ☐ Stripe account (payment processing)
- ☐ Xero accounting setup
- ☐ Slack workspace (internal comms)
- ☐ Notion CRM (customer + investor tracking)
- ☐ Basic contracts (pilot agreement, Terms of Service)

Week 2 (Nice-to-Have):

- ☐ LinkedIn company page + first post
- ☐ Calendly for demo booking
- ☐ Email templates (outreach, follow-up)
- ☐ Investor data room (Google Drive)
- ☐ Review platform profiles

- ☐ Press kit
-

Cost Breakdown (Monthly)

Essential (Month 1):

- Google Workspace: £10/month (2 users) *Hugo sets up*
- Stripe: Free (2.9% + 20p per transaction)
- Tide Bank: Free
- Xero Accounting: £12/month
- Railway Hosting: ~£20-50/month (depends on usage)
- Anthropic API: ~£100-300/month (depends on assessment volume)
- **Total: ~£150-400/month**

Optional (Month 2+):

- Notion: Free (startup program)
- Calendly: Free (1 calendar)
- Slack: Free (2 people)
- Pipedrive CRM: £14/month (if needed)
- **Total: +£0-20/month**

Marketing (Month 3+):

- LinkedIn Ads: £500-1,000/month
 - Google Ads: £500-1,000/month
 - **Total: +£1,000-2,000/month (only if funded)**
-

Who Owns What (Operational Tasks)

Task	Owner	Frequency
Email responses (hello@)	Both (shared inbox)	Daily

Task	Owner	Frequency
Customer pipeline updates	George	After each call
Investor tracker updates	Hugo	After each meeting
Invoicing customers	George	Monthly (automated via Stripe)
Expense tracking	George	Weekly (Xero)
Social media posts	Hugo	1-2x per week
Demo bookings	Both (via Calendly)	Automated
Contract sending	George	As needed
Legal/compliance	George (lead), Hugo (input)	Quarterly review
Accounting/VAT	George or outsource	Quarterly

8. 90 DAY EXECUTION PLAN

Month 1 (Weeks 1-4): Secure MVP & Launch Pilots

Product Milestones (George)

Week 1:

-  Security audit: Remove API keys from git, set environment variables
-  Railway PostgreSQL setup and migration
-  Add API rate limiting middleware

-  Create onboarding documentation (1-page guide)
-  Set up operational infrastructure (bank, Stripe, Xero, Slack, Notion)

Week 2:

-  Write unit tests for all 55 compliance rules
-  Integration test for full assessment workflow
-  Fix any critical bugs found in testing
-  Deploy to production with PostgreSQL
-  Set up Calendly, LinkedIn, investor data room

Week 3:

-  Run 10 test assessments with real documents
-  Validate accuracy against manual review
-  Optimize LLM prompts based on test results
-  Polish results dashboard (clearer visualizations)

Week 4:

-  Add error tracking and monitoring (Sentry/Railway logs)
 -  Create 5-minute demo video
 -  Set up uptime monitoring
 -  Prepare pilot customer accounts
-

Customer Milestones (Hugo)

Week 1:

- Finalize target customer list (20 contacts)
- LinkedIn outreach to 10 fire safety consultants
- Request warm intros from existing network
- Book 3-5 intro calls

Week 2:

- Run 5 intro calls with prospects
- Pitch: "Free pilot on your next 3 submissions"
- Send follow-up materials (deck, demo video)
- Target: 2 signed pilot agreements

Week 3:

- Continue outreach (10 more contacts)
- Follow up with Week 2 prospects
- Run demos for interested parties
- Target: 2 more pilot agreements (total 4)

Week 4:

- Onboard 4 pilot customers (with George)
 - Set up accounts and provide training
 - Schedule first assessment runs
 - Gather initial feedback
-

Investor Milestones (Hugo)

Week 1:

- Finalize pitch deck (10 slides)
- Prepare financial model (unit economics)
- List target investors (angels + accelerators)

Week 2:

- Apply to Seedcamp (rolling applications)
- Apply to Antler and EF
- Research warm intro paths to angels

Week 3:

- Reach out to 3 angels via LinkedIn

- Request intro calls (15 minutes)
- Share deck and demo video

Week 4:

- Run 2-3 angel intro calls
 - Present pilot traction
 - Gauge interest level
-

Month 2 (Weeks 5-8): Prove Value & Expand Pilots

Product Milestones (George)

Week 5:

- Implement DOCX export for document amendments (complete feature)
- Add email notifications (assessment complete, errors)
- Improve error messages (user-friendly)
- Add tooltips for compliance terms

Week 6:

- Optimize assessment speed (parallel rule evaluation)
- Target: Reduce from 2-5 min to <1 min
- Add caching for repeat documents
- Monitor AI costs and usage

Week 7:

- Implement usage analytics dashboard (for customers)
- Show: Assessments run, compliance trends, time saved
- Add admin panel (customer usage, system health)
- Prepare Stripe integration

Week 8:

- Stripe integration for subscriptions
 - Set up pricing tiers (Starter/Pro/Enterprise)
 - Test payment flows
 - Prepare invoice generation
-

Customer Milestones (Hugo)

Week 5:

- Follow up with 4 pilot customers on first assessments
- Collect feedback: Accuracy, UX, time saved
- Identify issues or missing features
- Continue outreach (5 new prospects)

Week 6:

- Conduct mid-pilot reviews with customers
- Document: # of issues found, time saved, consultant validation
- Start preparing case study content
- Target: 2 more pilot signups (total 6)

Week 7:

- Run demos for 5 new prospects
- Emphasize: Pilot customer success stories
- Negotiate pilot-to-paid conversion terms
- Target: 1-2 paid commitments

Week 8:

- Convert 2 pilots to paying customers
 - Target: £299-499/month subscriptions
 - Capture testimonials and quotes
 - Continue outreach (5 new prospects)
-

Investor Milestones (Hugo)

Week 5:

- Follow up with angels from Month 1
- Share pilot traction updates
- Schedule 2-3 more investor meetings

Week 6:

- Run investor pitches with pilot data
- Highlight: "4 pilot customers, X assessments run, Y accuracy"
- Refine pitch based on feedback

Week 7:

- Apply to Pi Labs, L Marks
- Continue angel outreach (3 more investors)
- Target: 2-3 serious conversations

Week 8:

- Negotiate terms with interested angels
 - Target: £50K-100K commitments
 - Prepare SAFE or priced round docs
-

Month 3 (Weeks 9-12): Scale Pilots & Close Funding

Product Milestones (George)

Week 9:

- Implement team collaboration features
- Add: Sharing assessments, commenting, task assignment
- Improve mobile responsiveness
- Fix bugs from pilot feedback

Week 10:

- Add document comparison (version diff)
- Show changes between submission iterations
- Implement audit trail improvements
- Add regulatory update notifications

Week 11:

- Performance testing at scale (50 concurrent assessments)
- Optimize database queries
- Add CDN for static assets
- Prepare for higher traffic

Week 12:

- Launch white-label option (for consultancies)
 - Custom branding, domain mapping
 - API access for partners (beta)
 - Finalize Gateway 3 roadmap
-

Customer Milestones (Hugo)**Week 9:**

- Complete pilot programs (collect final data)
- Document case studies: Challenge, Solution, Results
- Record video testimonials (2-3 customers)
- Target: 4 paid conversions from pilots

Week 10:

- Launch outbound campaign with case studies
- Use testimonials in sales conversations
- Reach out to 10 new prospects

- Target: 5 new pilot signups

Week 11:

- Attend industry event (Building Safety Conference or FPA)
- Network with fire safety consultants and developers
- Run 1-2 demos at event
- Collect 10+ qualified leads

Week 12:

- Close Month 3 with 8-10 paying customers
 - Target: £3K-5K MRR
 - Prepare Q2 growth plan
 - Identify partnership opportunities (architectural practices)
-

Investor Milestones (Hugo)

Week 9:

- Finalize investor pitch with Q1 traction
- Metrics: "8 paying customers, £4K MRR, 95% accuracy vs manual review"
- Run 3-4 investor meetings

Week 10:

- Negotiate final terms with interested angels
- Target: £100K-150K raised
- Prepare legal docs (SAFE agreement or priced round)

Week 11:

- Close angel round (£100K-250K total)
- Announce funding (LinkedIn, press release)
- Use PR boost for customer acquisition

Week 12:

- Plan use of funds: George full-time (6 months), customer acquisition, hosting
 - Set Q2 goals: 20 customers, £10K MRR
 - Prepare for accelerator (if accepted to Seedcamp/Antler)
-

KEY SUCCESS METRICS

End of Month 1:

-  4 pilot customers running assessments
-  10 validated test assessments (accuracy confirmed)
-  Security audit complete, PostgreSQL live
-  5 investor intro calls
-  Operational infrastructure set up

End of Month 2:

-  6 total pilot customers
-  2 paid customers (£300-500/month each)
-  Stripe integration live
-  1-2 case studies documented

End of Month 3:

-  8-10 paying customers
 -  £3K-5K MRR
 -  £100K-250K funding closed
 -  3 video testimonials
 -  Accelerator applications submitted
-

CRITICAL SUCCESS FACTORS

Product:

- Assessment accuracy must be 90%+ vs human review
- Assessment time must be <5 minutes (ideally <2 min)
- Zero security incidents (API keys protected, data encrypted)
- Export reliability must be 100% (every assessment generates reports)

Customers:

- Sign first paying customer by Week 8
- Convert 50%+ of pilots to paid by end of Month 3
- NPS score 50+ (customers would recommend)
- Zero churn in first 3 months

Investors:

- Secure at least £100K by end of Month 3
- Get accepted to 1+ UK accelerator (Seedcamp, Antler, EF, or Pi Labs)
- Build relationships with 5+ angels for future rounds

Operational:

- George commits full-time (or near full-time) by Month 2
 - Hugo maintains 5-6 hours/week minimum on business development
 - Weekly sync between founders (30-60 minutes)
 - Monthly review of metrics and progress
-

RISKS & MITIGATION

Risk 1: No Pilot Customers in Month 1

- Mitigation: Broaden outreach beyond fire consultants (add developers, HAs)
- Backup plan: Offer fully free assessments (no pilot commitment needed)
- George to run more demos personally

Risk 2: Low Pilot-to-Paid Conversion

- Mitigation: Collect feedback on why customers don't convert (price? features? trust?)
- Offer: "First month free" for paying customers
- Improve: Product based on feedback (missing features?)

Risk 3: Funding Doesn't Close

- Mitigation: Bootstrap longer (use Fospha salary + consulting income)
- Reduce burn: George part-time initially, scale up with revenue
- Alternative: Apply for Innovate UK grant or SBRI funding

Risk 4: Technical Issues Block Pilots

- Mitigation: Have 10 test assessments validated BEFORE onboarding pilots
- George provides white-glove support during pilot period
- Maintain backup manual process if system fails

Risk 5: Hugo's Time Constraint

- Mitigation: George takes on more customer-facing work (demos)
- Hire part-time BDR (business development rep) if funding closes
- Use automation for outreach (LinkedIn/email sequences)

APPENDIX: PITCH DECK OUTLINE

Slide 1: Cover

- Company name: Attlee AI
- Tagline: AI-Powered Gateway 2 Compliance in Minutes
- Founders: George Clarke (Product/Tech), Hugo Hiley (Commercial)

Slide 2: Problem

- 40%+ Gateway 2 rejection rates

- £50K-200K delay costs per rejection
- Manual compliance checking takes 5-20 hours per project
- Consultants overwhelmed with demand

Slide 3: Solution

- AI-powered compliance platform
- 55 proprietary rules + Claude Sonnet 4.5 enrichment
- 2-5 minute assessment vs 5-20 hours manual
- Auto-generates £500-1,000 compliance matrices

Slide 4: Product Demo

- Screenshots of upload → assess → results flow
- Link to 3-minute demo video
- Show compliance matrix and gap analysis

Slide 5: Traction

- X pilot customers signed
- Y assessments run
- £Z MRR (if any paid customers)
- 95% accuracy vs manual review

Slide 6: Market

- £20M+ annual TAM (UK Gateway 2 submissions)
- 2,000+ submissions per year
- Expanding: Gateway 3, Building Assessment Certificates
- International: EU, Australia have similar regimes

Slide 7: Business Model

- Subscription: £299-499/month per user
- Per-assessment: £99-149 per pack
- Enterprise: £2K-5K/month for consultancies

- Target: £5K-10K MRR in 6 months

Slide 8: Competition

- vs Traditional Consultants: 10x faster, 5x cheaper
- vs Generic AI (ChatGPT): 55 proprietary rules, audit trail, no hallucinations
- vs Checklists/Templates: AI-powered, auto-extracts evidence

Slide 9: Team

- George Clarke: Product/Tech, AI engineering background
- Hugo Hiley: Commercial, construction industry experience
- Advisors: (TBD - fire safety expert, proptech advisor)

Slide 10: Ask

- Raising: £100K-250K pre-seed
- Use of funds: 50% product, 30% customer acquisition, 20% operations
- 6-month runway to £10K MRR and Series A readiness

END OF OPERATING PLAN

This plan is a living document. Review and update monthly based on progress and market feedback.
